

Weekly image: Week 33, 2006

Vædderen in Copenhagen

Vædderen is alongside the quay Amaliehaven at Friday 11 August 2006.

The plan was that the satellite Quickbird should record an image either the 10th or 11th August of Vædderen while alongside the quay in Copenhagen. Unfortunately there was too many clouds to make this feasible. Instead we ordered COWI to make an aerial photo flight which resulted in this beautiful image.

The image is included in the Satellite Eye for Galathea 3 case study on Copenhagen, in which all the different satellite system recording images is presented.

Technical information: Aerial photography. Maximum resolution 4 cm. COWI.
